Antumbra Series

The stunning Antumbra range has an unprecedented number of features, packaged in a choice of three designs that redefine the concept of minimalist chic. When you first encounter Antumbra, it will detect your body's own magnetic field and 'wakes up' with a striking wall-wash lighting effect. With its array of inbuilt features, the Antumbra range offers an unparalleled balance of from and function.

The innovative use of **'field effects technology'** allows the keypad to automatically detect your presence by your body's own magnetic field.

A **wall-wash lighting effect** is triggered when approached, to welcome interaction. The built-in light sensor detects ambient light levels and ensures the wall-wash effect activates at a comfortable brightness level.

Each keypad contains an **integral temperature sensor**, allowing the temperature to be monitored at different locations throughout a building and obviating the need for third-party BMS or HVAC sensors and controls.

Designed in two halves, the keypad **can be installed in two stages**, without the need for further programming when the façade is installed.

Labeling for the Antumbra keypads are available in a **choice of English, Arabic and Chinese**, with an additional library of icons that has been created to give a visual representation of button functions in a way that transcends language barriers.

All indicators and sensor input functions are completely hidden, giving a **smooth streamlined finish**.

A selection of rim and fascia finish options are available for each Antumbra keypad. These can be mixed and matched to suit.

AntumbraButton

The AntumbraButton range utilizes large mechanical buttons. Different finish options are available for the fascia and rim of the keypad – all color options can be mixed and matched. Customized labeling of text and icons can be added.

AntumbraDisplay

The AntumbraDisplay contemporary design features a number of buttons and a central LCD display to present multiple pages of functions and systems information such as lighting scene or level, air conditioning temperature and set-point. Different color finish options are available for the fascia and rim. Color finishes can be mixed and matched.

AntumbraTouch

The AntumbraTouch range has a smooth glass finish and uses 'capacitive touch' technology to detect the presence of a finger to trigger a button-press action. Descriptive text and icon labeling to describe functionality, is available for this range.
